Interagency and International Services

One Corps serving The Army and the Nation

Interagency and International Services (IIS) is a Corps program to provide reimbursable technical assistance to other Federal agencies, state and local governments, Indian nations, private U.S. firms, international organizations and foreign governments.

In executing the Interagency and International Services program, the Corps seeks to provide management support that complements the expertise of other agencies and helps protect the Federal interest.

The Corps works with a wide range of partners in executing its IIS work. These include the Department of Defense and Department of Army, other Federal agencies, engineering associations, international associations and organizations and Congress. This program works in partnership, not in competition, with the private sector as about 85 percent of the work is contracted to the private sector.

In any year, the Corps assists over 60 Federal agencies managing the execution of, on average, a \$700 million program. The largest Federal agency customer is the Environmental Protection Agency and its Superfund program. Corps work for other agencies includes environmental and engineering work for the Department of Energy and construction support to the Immigration and Naturalization Service on building border crossing facilities.

With a separate authorization, the Corps provides support to the District of Columbia schools, which has resulted in a program that has made a substantial contribution toward improving the City's school infrastructure.

The Corps has an international program that is used by other agencies to support the objectives of the national security and military strategies. This program includes support to DOD and the Army, Foreign Military Sales, support to other agencies as the U.S. Agency for International Development, support to foreign governments and international organizations, implementation of treaties, and science and technology exchanges.

Since the events of September 11, the Corps has provided support to homeland security. The Corps has been asked to provide support with its protective design and electronic security expertise and its biohazard rapid response team. It has provided support to the U.S. Postal Service, New York City, the State Department and FEMA.
